

Maria Delacruz

Software Engineer | Full Stack (Python, React, Node.js) | Accessibility-Focused | Building Inclusive Tech |

WORK HISTORY

AEG Presents, Hybrid — *Product Support Coordinator*

MAY 2024 - PRESENT

- Built two internal applications to generate sweepstake campaign reporting data used by marketing directors, helping teams better understand performance metrics and make more informed targeting decisions.
- Developed a tool to efficiently search and extract user emails from CSV datasets, integrating it into the Front support platform to streamline workflows and reduce manual lookup time for support operations.
- Performed QA and accessibility testing across 250+ campaigns (including Coachella, Stagecoach, Camp Flog Gnaw, Electric Forest Festival, and many more), identifying bugs, usability issues, and WCAG compliance gaps; worked closely with engineering and web team to improve product reliability and create more accessible user experiences.
- Resolved 700+ technical issues by reproducing bugs, analyzing system behavior, and troubleshooting across different environments, contributing to improved application stability and a better user experience.
- Created and maintained over 100 technical documentation articles, breaking down system workflows, known issues, and troubleshooting steps to help teams resolve problems more efficiently and reduce repeated engineering effort.
- Facilitated the integration and adoption of the Tradable Bits CRM platform for 30+ non-technical stakeholders, actively contributing to interface design and accessibility testing for high-traffic digital campaigns.

Hanawilo, Remote — *Full Stack Software Engineer*

JANUARY 2023 - JUNE 2023

- Deployed full-stack features for an open-source web application utilizing a MERN stack (React, Node.js, Express, MongoDB) to scale platform functionality and support expanding user traffic.
- Collaborated in an Agile cross-functional team to conduct code reviews, enforce coding standards, and optimize front-end components, significantly improving system rendering performance and UI responsiveness.
- Designed and implemented normalized relational data schemas for user profiles and platform resources, optimizing query performance and ensuring scalable data management.
- Engineered secure user authentication and authorization workflows (using JWT/OAuth), implementing robust session management and profile controls to safeguard user data and streamline onboarding.
- Developed reusable UI components, including a site-wide navigation footer, ensuring strict adherence to responsive design principles, brand consistency, and seamless integration across all application routes.
